Trivadis Technology Radar

Trivadis Technology Radar

- Source available in the following GitHub private repository: <https://github.com/TrivadisPF/trivadis-technology-radar>
- Can be installed locally using docker-compose: <https://github.com/TrivadisPF/trivadis-technology-radar/blob/master/deployment/README.md>
- Deployed on AWS Lightsail
 - **Stable:** <http://3.122.200.138:28540/techradar/>
 - **Preview:** <http://3.122.200.138:28540/techradar/>
- To work on the Technology Radar, clone the develop branch of the Git project:

```
git clone --branch develop TrivadisPF/trivadis-technology-radar
```

Maintaining the Technology Radar

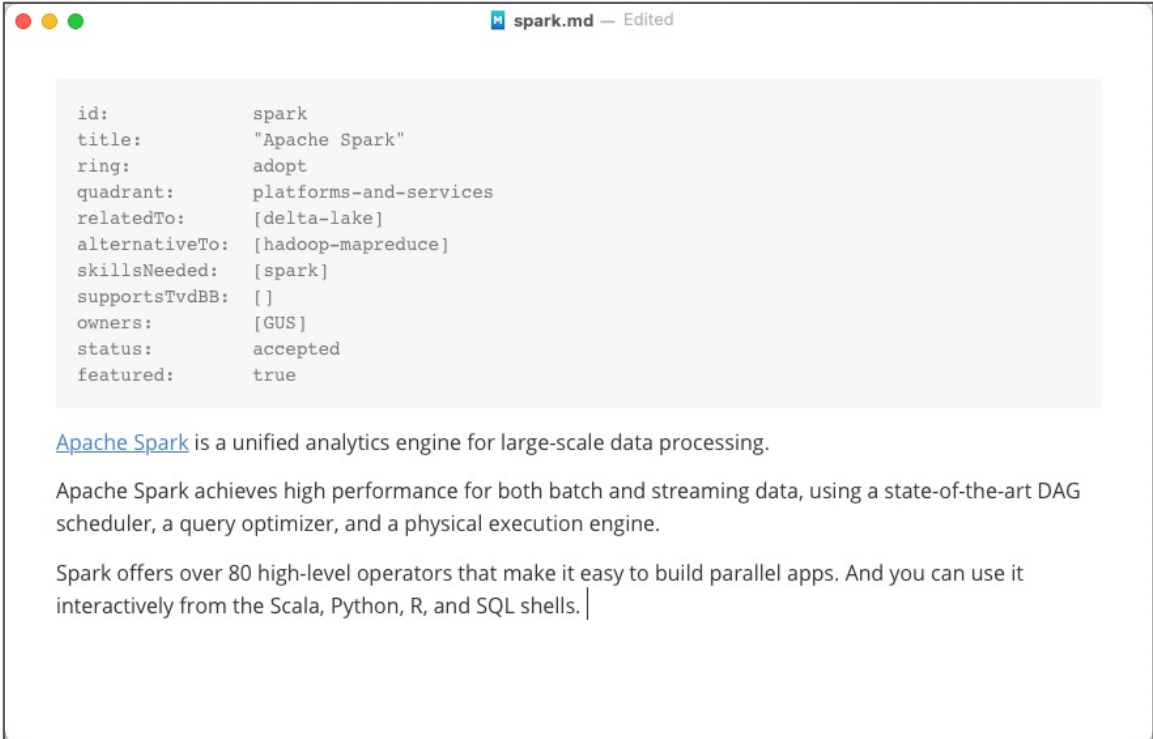

- A technology is specified as a [Markdown](#) file, placed into one of the subfolders inside folder `radar`
- Subfolders determine the date when the technology has been added
- Each file has a [front-matter](#) header where the attributes of the item are listed
 - Attributes `ring`, `quadrant` and `status` have to be one of the values shown on the next page
- For each technology the icon will be stored in the icon folder with the same name as the technology

```
---
id:                                react
title:                             "React"
info:                              "a modern web framework"
quadrant:                           languages-and-frameworks
ring:                               adopt
skillsNeeded:                       []
relatedTo:                          []
alternativeTo:                      []
supportsTvdBB:                     []
owners:                             []
knowHowPageURI:                    ""
status:                             draft
featured:                           true
---
Text goes here. You can use **markdown** here.
```

Maintaining the Technology Radar (II)

There are many good editors for maintaining markdown files, such as

- <https://typora.io/> (win,mac,linux)
- <https://macdown.uranusjr.com/> (mac)
- <https://wereturtle.github.io/ghostwriter/> (win, mac, linux)

```
id: spark
title: "Apache Spark"
ring: adopt
quadrant: platforms-and-services
relatedTo: [delta-lake]
alternativeTo: [hadoop-mapreduce]
skillsNeeded: [spark]
supportsTvdBB: []
owners: [GUS]
status: accepted
featured: true
```

[Apache Spark](#) is a unified analytics engine for large-scale data processing.

Apache Spark achieves high performance for both batch and streaming data, using a state-of-the-art DAG scheduler, a query optimizer, and a physical execution engine.

Spark offers over 80 high-level operators that make it easy to build parallel apps. And you can use it interactively from the Scala, Python, R, and SQL shells. |

Maintaining the Technology Radar (III)

Following front-matter attributes are possible:

- **id:** id of the technology
- **title:** Name of the Item
- **info:** (optional) A short textual description of the item (visible in overview pages)
- **quadrant:** Quadrant. One of `languages-and-frameworks`, `data-management`, `platforms-and-services`, `architecture-methods-and-patterns`
- **ring:** Ring section in radar. One of `trial`, `assess`, `adopt`, `hold`, `watch`
- **featured:** (optional, default "true") If you set this to false, the item will not be visible in the radar quadrants but still be available in the overview.
- **relatedTo:** relates to another technology (use the id of the other technology)
- **alternativeTo:** alternative to another technology (use the id of the other technology)
- **skillsNeeded:** the skills needed for this technology (use the id of the skill system to refer to the skill)
- **supportsTvdBB:** used to implement/deliver the Trivadis Building Blocks
- **status:** status of the technology item. One of `draft`, `proposed`, `rejected`, `accepted`, `deprecated`
- **owners:** the owner(s) of the technology, use the Trivadis employee abbreviations

Maintaining the Technology Radar (IV)

- Anyone can suggest a new technology by submitting a pull-request to the folder of the next iteration
- When finished, check-in the new file into GitHub and after a few minutes, it should be updated

Do we have one global radar or many subject based?

One base of Technology Radar

Many Technology Radars

Vs.

- Currently we are only working on one global Trivadis wide radar
- By using additional metadata we can later add different views onto the radar

Tech Radar in context
